I. Overview

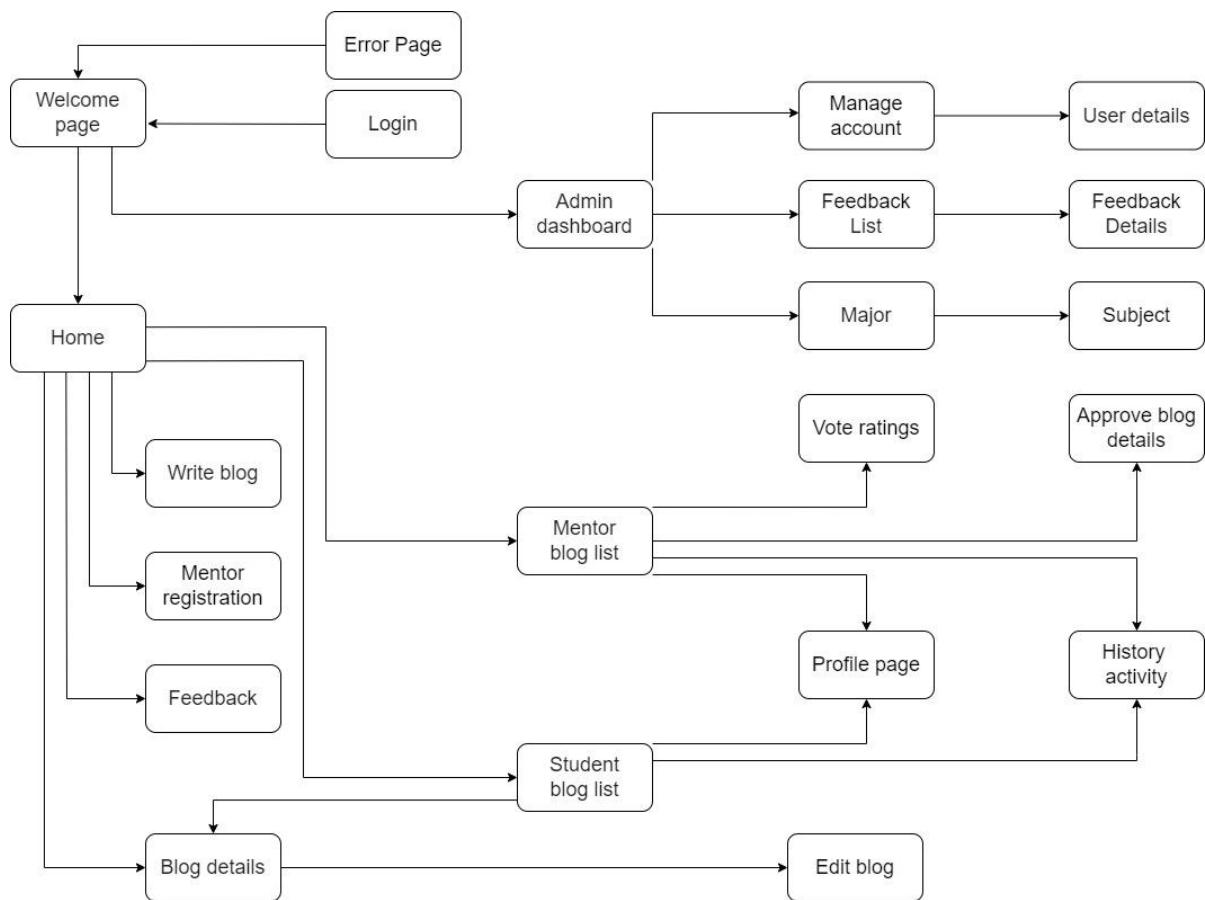

1. Introduction

In the digital era, information and data on the Internet are considered extremely rich knowledge resources. People can easily find information and data through this resource, however, that also brings many difficulties. Particularly, students are having difficulty in selecting the most urgent content and topics for their majors and subjects at university. In addition, students who have extracted experiences and knowledge through subjects and topics do not have the way to disseminate to the right audience - the students at university. Therefore, the Academic Blog at FPTU (ABF) was released as a solution to these problems. ABF is a website for all students of FPT University, this is a place for students to learn, gather knowledge and share experiences about their major, especially their subject. With some challenges in finding materials for research, the website is expected to provide more knowledge for students.

2. System Functions

A. Screen Flow

B. Screen Details

#	Feature	Screen	Description
1	Welcome	Welcome page	On this screen, a login button appears along with images related to FPT University. Inspire people to log in so they can read their shares and write their own blog.
2	Home page	Home	On this screen, shows a preview of featured blogs that are interactive or featured and can be clicked to view. In addition, there are places to choose to be able to write a new blog and choose to go to the feedback page.
3	Write new blog	Write blog	On this screen, this is a place for users to write up their academic experiences and share their learning experiences with people who are interested in that topic.
4	View blog	Blog details	This is the screen page, to view the details of the blog post so that the user can interact with the blog post with functions such as commenting, dropping icons, ... Along with that, the user will be able to comment on posts and viewers and if it's myblog then you have the right to edit it.
5	Edit blog	Edit Blogs	Show a page that allows users to view the blog's detailed information that has not been updated including thumbnail, title, content, video, and update date. The users can change the above information and

			then the “update date” will change after the users edit the blog.
6	Give Feedback	Feedback	On this screen, the page will display a form with some sections for users to assess the quality of the website. Particularly, at the top of the page, a section offers several options for the problems that students are facing. In the below section, students can write about their problems in detail. And at the bottom, the page will have a section for students to provide their suggestions that will improve the website in the future. Finally, the students need to send this form to the admin by clicking on the Submit button.
7	Admin page	Admin dashboard	On this screen, it shows what functions an administrator can administer such as: Manage account, view feedback, manage major and subject,... Here, the administrator can choose one of these functions to meet the requirements of management as well as edit and change to guide the content of the website in the future.
8	Manage account	Manage account	This screen will display the functions used to manage accounts (including students and lecturers) such as providing permissions for new teachers, removing accounts that are no longer in use or violating the rules,...
9	Feedback List	Feedback List	On this screen, a list of feedback sent by users about the system's problems or mentor's activities is displayed so that they can promptly solve problems to make the blog more complete. Along with each feedback there will be a button to view details about that feedback.
10	Feedback details	Feedback details	On this screen it will display a list of feedback from students and teachers about the system's operation and the stability of the website.
11	Manage Major	Major	This screen shows the list of managed majors. Along with the options to add, delete, edit for the displayed items. From there, there is a link to the subject page to manage specific subjects.
12	Manage Subject	Subject	On this screen, a list of subjects is displayed to attach to the user's blog posts. Along with the features: add, delete, edit, ... so that admin can manage those items.
13	Mentor page	Mentor blog list	On this screen, mentors can view and edit their information and show what functions a mentor can manage such as:View vote (view vote blog), Approve blog and as well as create a blog post
14	View vote	Vote Ratings	This screen will show the votes ratings of the blog and it has a button “Give awards” to show the pop-up give awards to the top votes ratings.
15	Approve blog	Approve blog details	On this screen, we can see a list and detailed content of blog posts such as: title, subject, subject, blog post content, .. posted by students and waiting for mentor approval.

16	Manage profile	Profile page	This function shows users' information including their full name, gender, participating majors, and self-image (avatar), users can change the above information by clicking the Edit button. However, the users are not allowed to change their email.
17	Manage activity	History activity	On this screen, teachers and students can see the action of their interactions such as: what blogs they have written, the votes they have voted, comments, detailed blogs. they watched,... during their use in the web
18	Student page	Student blog list	On this screen, students can view full their own blog lists and click on every blog to view in detail to edit when they want to change or delete the blog.
19	User details	User details	On this screen, the admin can see all user activities and these activities are sorted by most recent time.
20	Manage draft blog	Draft blog	On this screen, users can review their unfinished blog posts and users can continue to complete their blog posts on this page.
21	Mentor register	Mentor registration	This screen allows the user to apply to become a mentor of a certain subject by submitting the necessary certifications to demonstrate that the user has the necessary qualifications and knowledge to become a mentor of a subject that subject for admin to censor
22	Notify Errors	Error Page	This screen shows login errors such as not logging in with the suitable email, the account has stopped working or logging in with the wrong role, etc. These error messages will be displayed on the Error page.

In which:

- Guest: visitors who are not students of FPT University.
- Student: who are students of FPT University, are allowed access to the university's blog website.
- Mentor/ Lecturer: who is allowed access to the university's blog website, assesses, approves students' blogs, and gives awards for appropriate blogs.
- Admin: acts as the system administrator, creates categories, tags, and tracks other users.

D. Non-Screen Functions

#	Feature	System Function	Description
1	Sign-in with Google	API	Users use FPT University's Gmail accounts to log in to the blog website. Whenever users click on the sign-in button, the authorization request is sent. The web server will confirm "logged-in" to users after Google returns user Google account tokens.
2	System Handler	Sending emails/ notifications to users	The system will send notifications or emails to users whenever there are new blogs or other users interact with their blogs.

3. Common Requirements

Web server: Apache

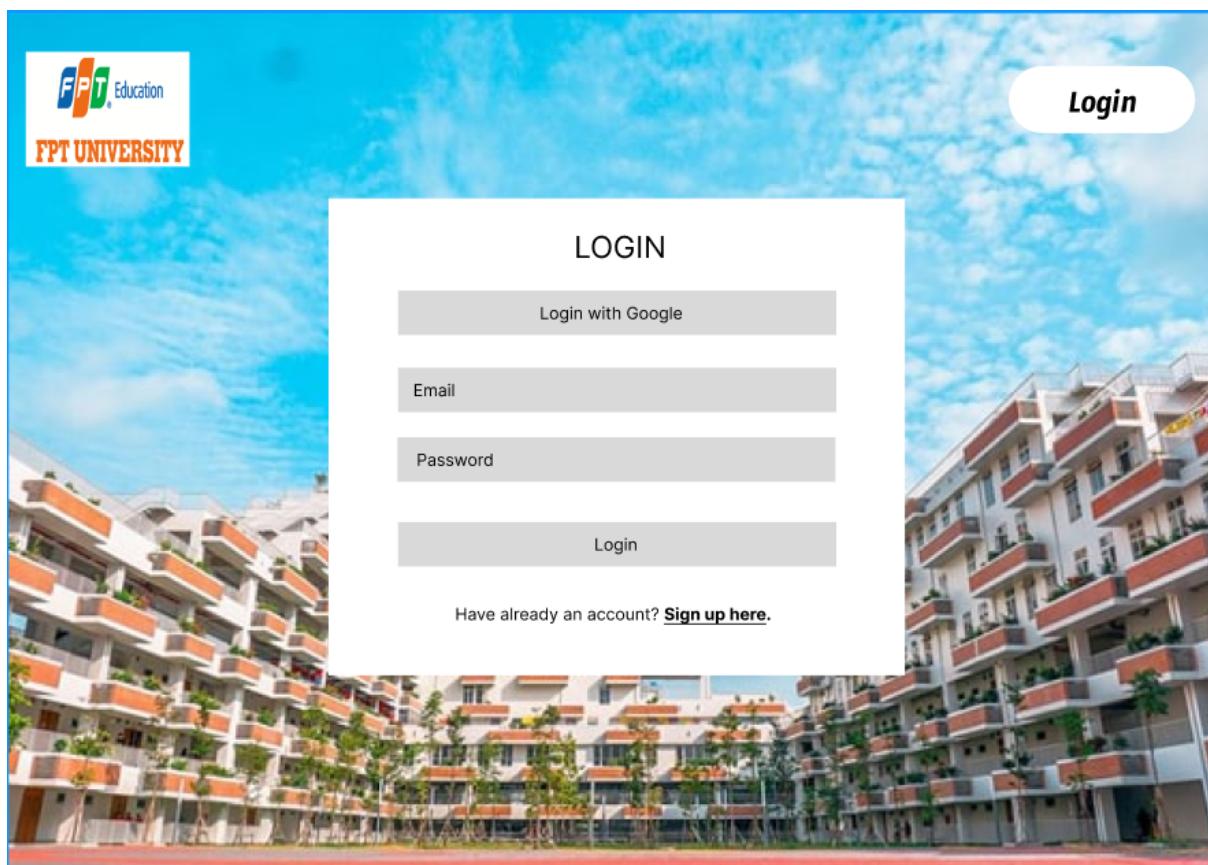

- User Login: authenticate the users to give them authorised features access to the system.
- User Authorization: authorise users into the web functions based on their roles.
- User Profile: view & edit/update user profile.

II. Functional Requirements

1. Welcome Page

1.1 Login with Google accounts

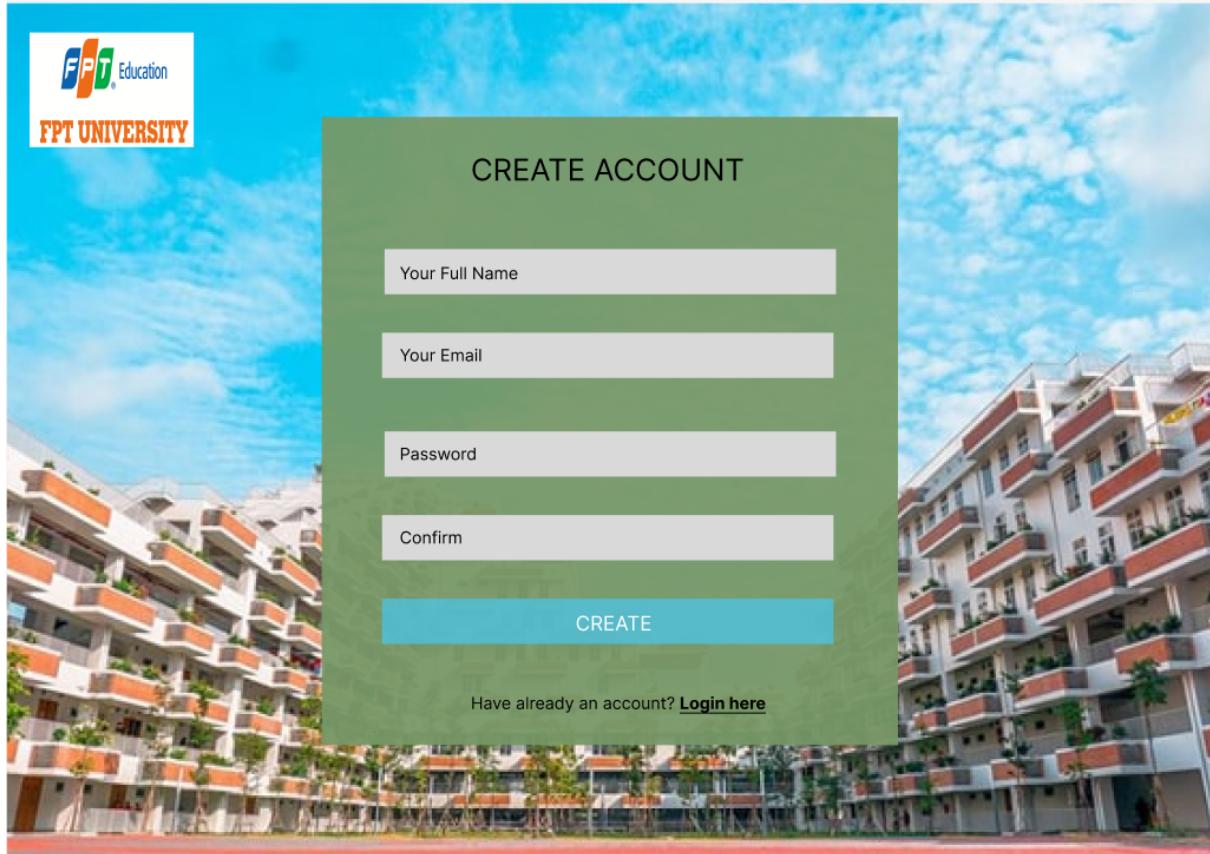

- Function trigger: when user provides correct information and clicks on login button.
- Function description:
 - + Roles: include guests, students, mentors, and admin.
 - + Purpose: confirm and authorise the user's information.
 - + Data processing: process email and password of users.
- Function details: data that the user provides must be contained in the database. If the data is not suitable, the system will notify an error.

1.2 Create Account

- Function trigger: when the user provides the correct registration full information and clicks the Create button.

- Function description:
 - + Roles: include guests
 - + Purpose: confirm and allow the user to register a new account.
 - + Data processing: check email and confirm user's password.
- Function details: register with FPT university email and must not exist in the database. If the data does not match, the system will report an error.

2. Home

2.1 Search blogs by title

- Function trigger: when the user enters the title to search and clicks on the search button.
- Function description:
 - + Roles: include students, mentors.
 - + Purpose: Users can find blog posts quickly.
 - + Data processing: process blog title
- Function details: the title of the blog is confirmed when there is data in the database and the system will display the blog post to find. When the title is not confirmed, the system will notify the blog post does not exist.

The screenshot shows a user interface for managing a blog. On the left, an orange sidebar contains navigation links: Home, Majors, Profile, Mentor registration, Feedback, Welcome username, Blog list, and Logout. Below the Welcome username is a small cartoon bear icon wearing sunglasses. The main area has a grey header with a search bar containing "Search blog..." and a green "Write Blog" button. Below the header are three cards, each consisting of an "Image" placeholder, a "Title..." field, a "Small Content..." field, and a "Read more" link.

2.2 Search blogs by major

- Function trigger: when the admin clicks "Search" on the "Home" page.
- Function description:
 - + Roles: Mentor and Student.
 - + Purpose: Mentor and Student to search blog by major.
 - + Data processing: Search for posts by major name.
- Function details: Search and display to the user a few articles related to the major the user is looking for. help users find articles quickly and effectively.

2.4. View all blogs

- Function trigger: when the user signs in to the Academic Blog website.
- Function description:
 - + Roles: include students and mentors.
 - + Purpose: display all blogs' information that is created by the students.
 - + Data processing: create blogs' information that is provided by the students.
- Function details: the system will display all the blogs that are written by the students and are approved by the mentors, the user can click on a specific blog to view this blog details.

The screenshot shows a user interface for an academic blog system. On the left, there's a vertical orange sidebar with a user profile picture of a cartoon character wearing sunglasses. Below the picture are links for 'Blog list' and 'Logout'. The main content area has a search bar at the top with the placeholder 'Search blog...'. A green button labeled 'Write Blog' is also at the top. The main content area displays three blog entries, each consisting of an 'Image' placeholder, a 'Title...' placeholder, a 'Small Content...' placeholder, and a 'Read more' link.

2.5. View personal page

- Function trigger: when the user signs in to the Academic Blog website and goes to the personal page.
- Function description:
 - + Roles: include students and mentors.
 - + Purpose: Allows users to view the user's personal blog.
 - + Data processing: View blogs' information, history activity , profile,.. that is provided by the students.
- Function details: The system will display all user information in the personal page.

The screenshot shows a user interface with a sidebar on the left and a main content area on the right.

Sidebar (Left):

- Home**
- Majors**
- Profile**
- History Activity**
- Feedback**
-
- Welcome username
-
- Blog list**
- Logout**

Main Content Area (Right):

At the top right of the main area are two buttons: **Search blog...** and **Write Blog**.

The main content area displays three identical blog card templates, each consisting of two columns:

Image	Title... <i>Small Content...</i> Read more
Image	Title... <i>Small Content...</i> Read more
Image	Title... <i>Small Content...</i> Read more

2.6. Give Feedback

- Function trigger: when user provides information and clicks on submit button.
- Function description:
 - + Roles: include students and mentors.
 - + Purpose: provide shortcomings that users are not satisfied with.
 - + Data processing: create feedback's information that the users provide.
- Function details: the user chooses the feedback type contained in the database and provides some description for the feedback, and clicks the Submit button to send this feedback to the admin.

2.10. View history activity list

- Function trigger: when the user signs in to the Academic Blog website and goes to the History activity in the personal page.
- Function description:
 - + Roles: include students and mentors.
 - + Purpose: Allows users to search user's activity.
 - + Data processing: Search activity information that is provided by the students.
- Function details: The system will display all lists of the activity that students did when using the Academic For FPTU website.

The screenshot shows a user interface for an admin dashboard. On the left, there is a vertical orange sidebar with a navigation menu and user information. The menu includes links for Home, Majors, Profile, Mentor registration, Feedback, Blog list, and Logout. Above the menu, it says "Welcome username" and shows a small profile picture of a cartoon character wearing sunglasses. The main content area has a search bar at the top with the placeholder "Search active...". Below the search bar is a table-like list with seven rows, each labeled "Action 1" through "Action 7". To the right of each row is a red rectangular button with the word "Delete" in white.

Action	Delete
Action 1	Delete
Action 2	Delete
Action 3	Delete
Action 4	Delete
Action 5	Delete
Action 6	Delete
Action 7	Delete

3. Admin Dashboard

3.1. View major list

- Function trigger: when the admin clicks on the majors option that is displayed on the navigation bar.
- Function description:
 - + Roles: include admins.
 - + Purpose: display all major's names that are created by the admins.
 - + Data processing: create major's names that are provided by the admins.
- Function details: the system will display all the names of the majors that are created by the admins, and the admins can delete or edit these majors or create a new one.

The screenshot shows a web application interface. On the left side, there is a vertical orange navigation bar with the following options: **Majors**, **Subjects**, **Accounts**, and **Feedback**. Below these options is a horizontal line, followed by the text **Welcome admin**, a user icon (a cartoon character wearing sunglasses), and the **Logout** button. On the right side, the main content area has a light gray background. At the top, there is a search bar with the placeholder text **Search blog...** and a green **Create** button. Below the search bar is a table-like list containing nine rows, each representing a subject named **Major 1** through **Major 9**. Each row has three columns: the subject name, a green **Edit** button, and a red **Delete** button.

Major 1	Edit	Delete
Major 2	Edit	Delete
Major 3	Edit	Delete
